VALENTINO GRANDE

Santa Coloma 9282, Rosario, Santa Fe, Argentina · +54 341 211 5831 · valentinogrande972@gmail.com
github.com/valentinogrande · linkedin.com/in/valentinogrande

SUMMARY

Self-taught software developer since age 14, specializing in systems programming with Rust, C++, and Python. Experienced in web backend development (Actix-Web, Django), relational databases (PostgreSQL, SQL), and AI algorithm implementation. Strong foundations in cryptography, cybersecurity, and low-level system design. Currently enrolled in Systems Engineering at UTN Rosario.

EDUCATION

Universidad Tecnológica Nacional (UTN), Rosario — 2026 – Present
B.S. in Systems Engineering
Currently enrolled in first year of Systems Engineering.

Colegio Stella Maris, Rosario — 2021 – 2025
Secondary School Diploma
Graduated with a grade point average of 8.0 / 10.0.

TECHNICAL SKILLS

Rust	*Advanced*	Cybersecurity & Cryptography	*Proficient*
Python	*Advanced*	SQL / PostgreSQL	*Proficient*
C++	*Proficient*	Bash / Linux	*Proficient*
Actix-Web / Django	*Proficient*	Web Design (Next.js / HTML)	*Intermediate*

SELECTED PROJECTS

educapp-showcase github.com/valentinogrande/educapp-showcase — 2024 – 2025
Rust · Actix-Web 4 · Next.js 15 · PostgreSQL
Full-stack school management system. Designed and implemented a RESTful backend in Rust with Actix-Web 4, a Next.js 15 frontend, and a PostgreSQL relational database. Handled authentication, data modeling, and API design end-to-end.

ia_rust github.com/valentinogrande/ia_rust — 2024
Rust · Artificial Intelligence · Graph Algorithms
Implementation of classical AI search algorithms in Rust: A*, DEA*, RBFS, BFS, DFS, bidirectional search, greedy best-first, and uniform cost search. Includes an interactive maze solver demonstrating greedy navigation in real time.

cryptograph github.com/valentinogrande/cryptograph — 2025
Rust · Cryptography · Number Theory
Educational cryptography library published as a Rust crate. Implements classical ciphers (Caesar, Affine, XOR stream cipher), number-theoretic primitives (Euclidean algorithm, Bézout identity, modular inverse), and a Linear Feedback Shift Register (LFSR) pseudorandom generator. Designed for clarity and low-level understanding of cipher mechanics.

bfuzz github.com/valentinogrande/bfuzz — 2024
Rust · Cybersecurity · Multithreading
Multi-threaded web fuzzer built in Rust with wordlist support. Designed for security testing and endpoint reconnaissance; leverages Rust's concurrency model for high-performance parallel requests.

chess ↗
Rust · Game Logic
Full chess engine in Rust, including move generation, rule enforcement, and game state management.

Arkadian ↗
Rust · Game Development
2D game built from scratch in Rust with integrated audio engine and real-time rendering.

COURSES & CERTIFICATIONS

English Language — C1 Certificate — Dec. 2025
Certified · Native Spanish

Introduction to Artificial Intelligence in Python — March 2023
Domestika
Final grade: 10 / 10. Covered graph search algorithms, TensorFlow, and supervised learning fundamentals.

VOLUNTEER EXPERIENCE

Academic Tutor — Viaclub, Opus Dei, Rosario — Feb. 2023 – Present
Mentor to students in grades 5–7. Deliver structured educational sessions, provide academic support across core subjects, and facilitate values-based teamwork activities. Responsible for curriculum planning and individual student progress tracking.

INTERESTS

Competitive chess (strategic analysis and pattern recognition); algorithmic problem-solving and competitive programming; applied cryptography; artificial intelligence research; systems-level software design.
